EDUCATION

Georgia State University

Graduation Date: May 2024

GPA: 3.88

B.S. in Computer Science

Atlanta, GA

TECHNICAL SKILLS

Programming: JavaScript, NodeJS, Typescript, C, PHP, Java, Python, HTML/CSS.

Database: MySQL, Firebase, Postman.

Frameworks: React, Bootstrap, React Native, Next.js, Framer Motion, Tailwind CSS.

Tools: Git, GitHub, Expo Go.

Software: VS Code, VS 2022, XAMPP, Notepad++.

Other: Window, Linux (Ubuntu), Oracle Cloud.

WORK EXPERIENCE

Freelance Software Developer | Remote

Apr 2025 - Present

- Developed a mobile app using React Native, Firebase, and Expo for a client managing vendor check-ins at large events.
- Implemented a feature to upload Excel files containing vendor details (slot, business, contact) into a Firebase Realtime Database.
- Integrated a QR code scanner to verify vendor check-ins and update attendance records in real time.
- Built a dashboard to display present vs. absent vendors for event staff visibility.
- Delivered a scalable and intuitive solution that streamlined vendor management during event check-in.

Distribution Center Associate | Amazon Warehouse – Union City, GA

Nov 2024 - Dec 2024

- Operated powered industrial trucks (PIT) to stow inventory while utilizing barcode scanning and warehouse management systems for accurate tracking. Leveraged the Inbound Destination Recommendation Tool (IDRT) and troubleshooting skills to optimize workflows and maintain productivity in a fast-paced, tech-driven environment.

Data Entry Associate | VN Accounting & Tax – Lake City, GA

Jan 2023 - Apr 2023

- Using QuickBooks, ensure precise recording of deposits and check writing. Improved efficiency by 30% through streamlined data management practices, contributing to enhanced financial record accuracy.

Customer Service Associate | K&G Fashion Superstore – Atlanta, GA

Sep 2019 – Present

- Proficient in customer service and optimizing transaction efficiency using computerized POS systems, achieving an 80% reduction in processing time. Skilled in stock organization, inspecting and preparing merchandise deliveries, and leveraging computer systems to ensure inventory availability.

PROJECTS

OWO Discord Bot – Auto Play | Automated Gameplay Bot for OWO Game

Feb 2025

- Developed a Node.js application to manage multiple account for automating game functions in OWO.
- The implemented features include capturing embed messages, handling captchas through music and HTML Gmail notifications, automating gameplay for three gambling activities with a 65% success rate to maximize profit, and efficiently completing all game quests.
- Integrated a chat command interface and stable status display for flexible control and monitoring of game actions.

GSU ReviewHub | A Full-Stack Course Review Website

Apr 2024

- Designed and developed a full-stack web platform to simplify the process of finding and reviewing college courses at GSU.
- Implemented secure user authentication, interactive dashboards for students and admins, and a robust commenting system to foster engagement.
- Enabled Excel file uploads for admins to easily manage large volumes of course review data in a MySQL database.
- Added intuitive search and filtering features so users could quickly find courses relevant to their interests and academic plans.

Handwritten Digit Prediction | A Prediction Website

Mar 2024

- Led a team of 3 to build an interactive website that accurately predicts handwritten digits from user-uploaded images using deep learning.
- Trained a convolutional neural network (CNN) with TensorFlow/Keras on the MNIST dataset, optimizing the model through experimentation and testing. Applied image preprocessing techniques such as grayscale conversion, resizing, and inversion to match input images with the training format.
- Deployed the site to Oracle Cloud, making it accessible for users to upload images and instantly receive digit predictions with visual feedback.

Bad Habits Web | A Full-Stack Ecommerce Website

Nov 2023

- Developed a full-stack e-commerce platform using ReactJS (frontend), NodeJS (backend), and MySQL (database) with a team of 5.
- Achieved key functionalities, including Authentication using JSON Web Tokens (JWT), and User / Admin Dashboard.
- Designed and integrated RESTful APIs to facilitate seamless communication between the front and back end, ensuring efficient data retrieval and manipulation.
- Implemented dynamic data retrieval from the database, enabling seamless display and management of items on the dashboard, contributing to a 20% increase in overall platform traffic.
